SUMMARY

Product designer with 6+ years of experience in B2B and B2C products and AI features. At SberEducation I've designed an AI tutor for a platform with 150K+ users and a paid consultation service that reached 16,000 users in two months with no marketing. I care most about the parts of the job that are easy to skip: understanding why a flow is confusing before redesigning it, keeping a design system honest as the product grows, and giving junior designers real feedback, not just approvals.

EXPERIENCE

Product Designer — SberEducation Jul 2022 – Present
B2B and B2C web platforms within the Sber ecosystem

- **AI learning platform** (150K+ users, 63K MAU, 60+ regions of Russia): designed goal-setting, personalized learning paths and an AI tutor inside assignments that guides users toward the answer instead of giving it away. Used click maps and scroll analysis to find where users get lost and feed fixes into the next iterations.
- **Career guidance for teens:** interviews showed teens didn't want another long career test, so we pivoted to a short test plus an expert consultation. In 2 months with no marketing: 16,000 users, 1,160 consultation requests and 58% request-to-payment conversion.
- **Gamified functional literacy marathon:** proposed a 3D-world concept and took it from research to launch in one month on a legacy platform. The Friends & Family stage caught 82 critical bugs before scaling. Course completion reached 12–15% against a 5–10% market benchmark.
- **Design system:** built a system of variables, clear design rules and page templates that keep screens consistent and easy to extend across product teams. Run design syncs and cross-team reviews.
- Mentor junior designers; created an internal mentorship program connecting 40+ mentors across 12 disciplines.

UX/UI Designer — 22byte Sep 2021 – Jul 2022

- Designed complete release packages for mobile apps and games: in-app UI, graphics, banners, logos and store mockups for App Store, Google Play and Xiaomi.
- Introduced templates, reusable UI components and shared design rules: team output grew from 20 to 58 release packages per week and delivery time dropped by ~35%.
- Used Unity and coding basics to fit UI to gameplay mechanics, working directly with developers.

Freelance Product Designer Apr 2020 – Present

- Redesigned landing pages for an online physics course and a travel agency, lifting conversion by up to 30%.
- UX consultation for a crypto company on its main page and wallet activity; the recommended changes raised retention by up to 12%.
- Built interactive prototypes for an agritech startup to test product hypotheses before any development started.

SKILLS

Product & research: discovery, competitive analysis, job stories, user interviews, surveys, usability and hypothesis testing

Methods: Design Thinking, JTBD, CJM, user story mapping, personas

Design: web, mobile and game UI; design systems, UI kits and style guides; responsive layouts; interactive prototypes

Analytics: funnels, click maps and scroll analysis; Yandex Metrica, SimilarWeb

Collaboration: PMs, developers, analysts, QA, UX writers and researchers; design critiques and feedback loops

Tools: Figma, Unity

EDUCATION

Moscow Pedagogical State University — Fundamental Physics (in English), 2019
Courses: UX/UI design internship, Uprock school (2020) · Google UX Design certificate

LANGUAGES

English
Russian
